

Escalation Matrix

REF-IM-010 | Version 1.3

Sample training content for learning MkDocs: [convert this PDF into Markdown under docs/](#).

When to escalate

Escalate when the SLA is at risk, the issue exceeds Tier 1 skills, or a major incident is declared.

Level	Owner	Trigger
Tier 1	Service Desk	Initial triage and known fixes
Tier 2	Platform teams	Complex config, multi-user impact
Tier 3	Engineering / vendor	Code defects, infrastructure faults
Major Incident	Duty manager	Sev 1 or widespread Sev 2

Contacts (sample)

- Duty manager on-call: via PagerDuty schedule IT-Duty
- Security CSIRT: security@contoso.example
- Vendor bridge: open only after Tier 3 acknowledges

Documentation required

Every escalation must include timeline, impact statement, reproduction steps, and current workaround.
